

OperatorOS

TRADE COMPANIES / FIELD SERVICES

TradeFlowKit

# Finish the job. Keep the revenue moving.

Customer, crew, quote and cash status.  
One connected operating story.

---

A BETTER WAY TO OPERATE

SHOTGUN NINJAS PRODUCTIONS / 05 OCTOBER 2026

# Busy crews can hide a broken handoff.

01

---

## The inquiry stalls

A customer wants the work. The next action lives in someone's memory.

**Opportunity slips.**

02

---

## The job gets fragmented

Scope, dates and field updates travel through different conversations.

**The office chases.**

03

---

## The invoice waits

Completed work and approved quotes are still waiting on the next billing step.

**Cash gets delayed.**

# One job. A connected path from inquiry to payment.

## THE RECORD YOU KEEP

Know what was requested, who owns it, what the customer decided and what is still owed.

# Your core workflow. One OperatorOS home base.

One flagship per organization. Expand with the eligible companions your team needs.

# The operating essentials, connected to the work.

01

## Win the next job

Lead pipeline, follow-up status, saved views and lead-to-job conversion.

02

## Prepare the crew

Customer and site records, numbered jobs, dates, owners and ordered tasks.

03

## Repeat good work

Reusable workflow stages, recurring jobs, pause controls and run history.

04

## Make the quote clear

Line items, totals, customer decisions and quote-to-invoice continuity.

05

## Follow the balance

Invoices, manual payment references, balances, refunds and settlement state.

06

## See the pressure

Revenue Rescue, workload views, business activity and accounting exports.

# Start the day where revenue gets stuck.

A ranked workday brief turns recorded business activity into the next useful action.

**Every priority leads back to a real business record.**

01

## **Overdue invoice**

Review the balance and follow-up.

02

## **Accepted quote**

Check the missing invoice handoff.

03

## **Finished job**

Review work still awaiting billing.

04

## **Late or blocked task**

Open the delivery work at risk.

WORKFLOW DIAGRAM / ILLUSTRATIVE

# The estimate that never gets lost.

## THE MOMENT

A replacement-system inquiry arrives during the busiest week of the season.

- 1 Capture**  
Save the lead and name the follow-up owner.
- 2 Quote**  
Prepare the job and quote; record the customer decision.
- 3 Deliver**  
Keep the schedule, tasks and invoice with the customer.

## WHAT THE TEAM CAN SHOW

A traceable customer-to-job-to-invoice record.

MEASURE / Time from qualified inquiry to customer decision.

# The customer asks: “What did you finish?”

## THE MOMENT

A multi-visit electrical job is complete. The office needs a clear account of scope and field work.

MEASURE / Time spent assembling a customer closeout.

- 1 Connect**  
Open the job and its customer context.
- 2 Document**  
With SnapProofOS access, review field photos and findings.
- 3 Explain**  
Return the approved proof report to the originating job.

## WHAT THE TEAM CAN SHOW

The job, approved report and invoice context in reach.

# The repeat visit gets a real owner.

## THE MOMENT

A customer needs recurring maintenance, but scheduling reminders and follow-ups are spread across spreadsheets.

1

### Template

Define the repeat service and schedule.

2

### Review

Check the next run and the actual job created.

3

### Follow through

Assign work, complete tasks and review billing status.

## WHAT THE TEAM CAN SHOW

A repeatable service record with visible run history.

MEASURE / Scheduled service jobs created and completed on time.

# One job tells the whole story.

01

## Add a customer

Use a shared customer or create a reviewed record.

02

## Build the work

Create the job, owner, task and quote.

03

## Move it forward

Record the decision and review the invoice.

04

## See what remains

Open the workday brief and balance history.

### SUCCESS CHECK

A second teammate can find the next action without asking the first.

# Extend the workflow where it matters.

## SnapProofOS

### Make completion tangible.

Photos, findings and reviewed customer reports tied to eligible jobs.

**Choose it for proof of work.**

## BrandForge OS

### Prepare the next campaign.

Reusable brand material and reviewed campaign drafts for your next service offer.

**Choose it for consistent marketing.**

One eligible companion is included. Additional companions are separate. AI generation needs an accepted provider connection; campaigns are reviewed and exported.

# Fit the workflow to your real environment.

## TRADEFLOWKIT OWNS

---

### The customer/work record

Leads, jobs, quotes, invoices,  
activity and follow-up.

## CONNECTED SERVICES HANDLE

---

### External delivery

Online payments and  
outgoing messages require  
configured, tested providers.

## YOUR ACCOUNTING STAYS

---

### The accounting authority

Use supported exports. Direct  
QuickBooks Online sync is  
planned.

# A clearer record when the questions come.

---

## Who changed it?

Business activity ties changes to a person, record and time.

---

## What was completed?

Use recorded tasks and approved supporting evidence.

---

## What did they decide?

Keep the quote response and current work status in context.

---

## What was paid?

Distinguish recorded payments, open balances and confirmed settlement.

A work record supports a clear explanation. Customer authorization and financial confirmation still need the appropriate evidence.

# Measure the change in your own operation.

## Quote turnaround

Qualified inquiry → customer decision

## Billing handoff

Completed jobs without a linked invoice

## Cash follow-up

Age and value of outstanding invoices

## Admin effort

Minutes to assemble a job closeout

## Where does a finished job wait before it becomes collected revenue?

Agree the baseline, sample and success threshold together. No outcome guarantee is implied.

# Start focused. Give the team room to work.

1

## TradeFlowKit

Your flagship application

5

## Team seats

Included with the stack

1

## Eligible companion

Chosen for your organization

Free OperatorOS home base. Monthly billing. Add seats and eligible companions as needed.

Confirm the current quote and any usage charges before activation.

[Review plans →](#)

# Prove the fit with a focused 30-day pilot.

## WEEK 1

---

### SET THE BASELINE

Select one service line and five users. Map one job path and current delays.

## WEEKS 2-3

---

### WORK THE FLOW

Run a small agreed job sample.  
Review exceptions each day.

## WEEK 4

---

### CLOSE THE LOOP

Check proof, billing handoffs and balances. Compare the baseline.

**Continue when the team can carry a job through the agreed workflow and explain every open next step.**

OperatorOS

THE NEXT CONVERSATION

# Bring one job that should have moved faster.

We'll map the missed handoff, show the connected workflow and agree what a successful pilot must prove.

**Map your workflow with us →**

[operatoros.net/for/trades](https://operatoros.net/for/trades)

# The questions that make the fit clearer.

---

**“We already use accounting software.”**

Keep it. Evaluate the customer-to-work-to-invoice handoffs around it. Start with supported accounting exports; do not assume direct QuickBooks sync.

---

**“The crew will not tolerate more admin.”**

Start with one job and the few fields needed to own the next action. Measure entry and handoff time with the actual team.

---

**“Can everything send and collect automatically?”**

Messages and online payments require verified services. Keep approval, delivery and settlement states distinct during the pilot.

# Capabilities at a glance.

## Sales

Leads • owners • status • saved views

---

## Delivery

Jobs • tasks • dates • workflow stages

---

## Quotes

Line items • totals • customer decision

---

## Payments

Manual reference • provider settlement

---

## Follow-up

Permission-aware messaging outbox

---

## Accounting

Supported accounting exports

---

## Customers

Shared directory • contacts • sites

---

## Repeat service

Recurring templates • next run • pause

---

## Invoices

Issue • share • balances • corrections

---

## Visibility

Revenue Rescue • workload • analytics

---

## Evidence

Activity • eligible SnapProofOS handoff

---

## Access

OperatorOS members • roles • app access

---

# Agree the scope. Verify the workflow.

## Start here

One service line, a reviewed customer sample and a complete job workflow.

## Verify before relying on it

Message delivery, payment setup, settlement and the exact accounting export needed.

## Keep outside the pitch

Direct QuickBooks Online sync, automatic dispatch and guaranteed revenue improvement.

---

Scenario examples are illustrative. Workflow diagrams are explanatory, not product screenshots.

Product scope reviewed 05 Oct 2026. Validate the selected tenant and connected services before rollout.
